

Q1: What is the main purpose of the study? A1: The main purpose of the study is to investigate the effects of the independent variable on the dependent variable.

Q2: What are the independent and dependent variables? A2: The independent variable is X, and the dependent variable is Y.

Q3: What is the research hypothesis? A3: The research hypothesis is that there is a positive correlation between X and Y.

Q4: What is the significance level? A4: The significance level is set at 0.05.

Q5: What is the sample size? A5: The sample size is 100.

Q6: What is the data collection method? A6: The data was collected through a survey.

Q7: What is the data analysis method? A7: The data was analyzed using SPSS software.

Q8: What are the results of the study? A8: The results show a significant positive correlation between X and Y (p < 0.05).

Q9: What are the conclusions and implications of the study? A9: The study concludes that there is a significant positive correlation between X and Y. The implications are that X may be a useful predictor of Y.

Q10: What are the limitations of the study? A10: The limitations of the study include the use of a self-reported survey and a cross-sectional design.

Q11: What are the strengths of the study? A11: The strengths of the study include the use of a large sample size and a standardized data collection method.

Q12: What are the future research directions? A12: Future research should explore the underlying mechanisms of the relationship between X and Y.

Q13: What is the overall conclusion of the study? A13: The overall conclusion is that there is a significant positive correlation between X and Y.

Q14: What are the key findings of the study? A14: The key findings are the significant positive correlation between X and Y and the implications for future research.
